

## Press Release

### AnaCise Launches its Next-Generation Intelligent Handheld Tester

Taipei, Taiwan, - March 5, 2010

AnaCise, a company of developing handheld testers and equipments of GigE/xDSL triple play testing, measuring and monitoring solutions, today announced its industry-leading all-in-one handheld tester—CSN (Convergent Service Navigator) for the installation, maintenance and troubleshooting of convergent network which supports Data, IPTV and VoIP.

AnaCise's CSN is easy to use. It features "Automatic Discover MPEG Streams with One Touch" that will provide user an ingenuity view of all IPTV streams in an at-a-glance screen and easy to drill down for further analysis, the on-air playback of specific channel achieve the way of "Seeing is Believing". AnaCise's CSN runs highly complex tests, but users perform them quickly and simply.

Other efficient and intuitive features are described as below.

- "*Network Auto Discover*" would simplify the installation and troubleshooting.
- "*Intelligent Bi-Direction Bandwidth Test*" rapidly identifies available bandwidth in seconds.
- "*Remote-Remote Control*" practices a real end-to-end solution for proactive service assurance and remote VoD verification promptly.
- "*A/V Input*" allows field engineers need not to carry a TV-set for IPTV test.

AnaCise's CSN offers comprehensive test capabilities that can expedite IPTV network deployment, maintenance, and troubleshooting to help service providers to offer better services to their customers.
